

NEXT GENERATION SMART CONTRACT

METAPOL.

DECENTRALIZED MATRIX & PASSIVE MINING ECOSYSTEM

A 100% autonomous, secure, and hyper-profitable architecture deployed on the Polygon Blockchain. Dual-earning mechanics engineered for immediate wealth generation.

VERIFIED SMART CONTRACT • BUILT ON POL

THE EVOLUTION OF WEB3 INCOME

Traditional smart contract systems offer only one way to earn: active recruiting. If the recruitment slows down, your earnings stop. **MetaPOL solves this forever.**

The Old Matrix Flaw

- ✦ Dependent entirely on continuous user acquisition
- ✦ Non-working members get stuck with zero returns
- ✦ No built-in passive value generation engine
- ✦ High friction, low long-term retention

The MetaPOL Revolution

- ✦ **Dual-Engine Mechanic:** Seamlessly integrates a Global Matrix and a Per-Second Passive Mining protocol.
- ✦ **Guaranteed Asset Growth:** Every single slot purchase instantly triggers a high-yield passive mining entry.
- ✦ **100% Decentralized:** No human intervention, no manual processing, automated instant transfers.

ECOSYSTEM CORE PILLARS

MetaPOL is powered by two perfectly balanced economic mechanisms that operate simultaneously under a single smart contract.

72%

Global Matrix System

72% of all slot volumes flow directly into the network structure. An ultra-fast, cyclical pool queue where participants receive substantial peer-to-peer rewards based on global project momentum and direct team building.

20%

High-Yield Passive Mining

20% of all slot volumes are instantly directed into your personal smart mining entry. Generates a rock-solid, predictable passive yield computed every block, directly accessible at any moment.

5x

Value Multiplier (500%)

Your mining entry is programmatically supercharged to generate up to 500% (5x) of its initial allocated capital. Turn your structural upgrades into a long-term passive cash flow powerhouse.

REGISTRATION & THE ONBOARDING GATE

Step 1: Secure Account Registration

To enter the immutable MetaPOL global ledger, a baseline deployment fee is required.

5 POL

STANDARD REGISTRATION FEE

100% Sponsor Distribution: The registration capital is routed instantly to the wallet of your direct inviter (Sponsor Share), securing strong team synergy.

Step 2: Activating Slot 1 (The Income Engine)

Once registered, you activate Slot 1 to position yourself in the global earning queues and initialize your passive mining streams.

- ✦ **Slot 1 Allocation Price: 10 POL**
- ✦ **Matrix Structure Contribution (72%): 7.2 POL** goes directly into the active user payout distribution.
- ✦ **Mining Protocol Allocation (20%): 2.0 POL** goes instantly into your personal passive mining contract.
- ✦ **Passive Mining Yield Target (5x Cap):** Generates up to **10.0 POL** in total returns.

12 TIERS OF WEALTH: THE LEVEL STRUCTURE

MetaPOL features 12 progressive levels. Each level increases your capacity to capture larger global matrix rewards and establishes a bigger, high-yield passive mining allocation.

LEVEL	SLOT PRICE	MATRIX ALLOCATION (72%)	MINING CAPITAL (20%)	5X MINING CAP	CYCLE THRESHOLD
Slot 1	10 POL	7.2 POL	2.0 POL	10.0 POL	3 Positions
Slot 2	20 POL	14.4 POL	4.0 POL	20.0 POL	3 Positions
Slot 3	40 POL	28.8 POL	8.0 POL	40.0 POL	4 Positions
Slot 4	80 POL	57.6 POL	16.0 POL	80.0 POL	4 Positions
Slot 5	160 POL	115.2 POL	32.0 POL	160.0 POL	4 Positions
Slot 6	320 POL	230.4 POL	64.0 POL	320.0 POL	4 Positions
Slot 7	640 POL	460.8 POL	128.0 POL	640.0 POL	4 Positions
Slot 8	1,280 POL	921.6 POL	256.0 POL	1,280.0 POL	4 Positions

**Slots 9 to 12 continue doubling in scale, culminating in Slot 12 at 20,480 POL, unlocking unparalleled cashflow.*

HIGH-TIER MEGA SLOTS (9 - 12)

The ultimate wealth generation takes place in the high-tier levels. Activating these tiers positions you to receive substantial global overflow payouts and massive passive mining allocations.

LEVEL	SLOT PRICE	MATRIX ALLOCATION (72%)	MINING CAPITAL (20%)	5X MINING CAP RESULT	CYCLE THRESHOLD
Slot 9	2,560 POL	1,843.2 POL	512.0 POL	2,560.0 POL	4 Positions
Slot 10	5,120 POL	3,686.4 POL	1,024.0 POL	5,120.0 POL	4 Positions
Slot 11	10,240 POL	7,372.8 POL	2,048.0 POL	10,240.0 POL	4 Positions
Slot 12	20,480 POL	14,745.6 POL	4,096.0 POL	20,480.0 POL	4 Positions

Strategic Advantage: Moving aggressively into higher slots maximizes your passive mining baseline. When you hit Slot 12, your single mining cap is **20,480 POL**, completely changing your portfolio's earning trajectory.

THE PASSIVE MINING PROTOCOL ENGINE

Real-Time Yield Architecture

Unlike traditional platforms that force waiting times or lock assets, MetaPOL processes returns continuously.

- ♦ **Per-Second Accrual:** Rewards are computed line-by-line via the smart contract using the formula based on block timestamp updates.
- ♦ **1.5% Daily Rate:** An institutional-grade baseline reward rate of 1.5% daily, compounding your presence on the chain.
- ♦ **Absolute Freedom:** Withdraw your accumulated mining yields at any time. Zero administrative lock periods.

The 5x Cap System

To maintain an unbreakable economic model, each individual entry follows a 500% cap lifecycle.

Example (Slot 8 Activation):

- Total Price: 1,280 POL
- 20% Mining Capital: **256 POL**
- 5x Maximum Contract Return: **1,280 POL**

Once the 5x threshold is fully extracted, that specific entry becomes inactive. New entries are created dynamically with every automated or manual slot upgrade!

THE GLOBAL MATRIX QUEUE MECHANISM

The MetaPOL matrix operates as a single, unified global queue per level. This is not a traditional matrix with empty branches that break. It is a linear, high-efficiency throughput line.

1

Global Alignment

Every user worldwide who buys or upgrades a slot is placed sequentially in a single line behind the currently active income earner.

2

Direct P2P Flow

When new positions enter the line, 72% of their slot price is routed instantly to the user standing at the front of the queue.

3

The Cycle Threshold

Once the active user receives the required number of payments (3 for Slots 1-2, 4 for Slots 3-12), their position **Cycles**.

This structural flow ensures continuous team velocity and zero dead weight.

THE CYCLE & AUTO-REPURCHASE PROTOCOL

Infinite Cyclical Loops

What happens when your position finishes its current queue threshold? The contract executes an automated re-entry loop.

- ♦ **Auto-Repurchase:** The contract resets your counter on that level and places your position at the very back of the active queue line.
- ♦ **Perpetual Earning:** You can cycle through the same slot multiple times, generating recurring revenue from the global network volume.
- ♦ **No Fresh Capital Needed:** Re-entry is fully funded by the incoming slot cycle volume, requiring zero extra out-of-pocket capital.

Unstoppable Momentum

Because top leaders and early users constantly re-enter at the bottom of the line, they push newer participants up to the payout position.

The Flywheel Effect

Every cycle drives a mandatory re-entry, creating constant, reliable movement. The community supports itself automatically through the immutable code layout.

AUTO-UPGRADE: THE COMPOUNDING MACHINE

MetaPOL enforces an automatic escalation matrix that guides users from a 10 POL entry all the way to the 20,480 POL mega tier without additional manual out-of-pocket funding.

How Auto-Upgrade Works

When your position completes its current level cycle, the total accumulated capital always covers the cost of the next level up.

The contract instantly processes your entry into the next higher pool line and generates a brand new passive mining allocation tied to that tier.

Instant Profit Splits

Any surplus revenue remaining after funding the upgrade is paid directly to your Web3 wallet as pure profit.

If you have already purchased the next level manually beforehand, the upgrade phase is skipped, and 100% of the matrix share lands directly in your wallet.

Slot 12 Freedom

Once you reach Slot 12, there are no higher levels to fund.

Every single subsequent Slot 12 cycle converts into 100% pure profit, routed instantly to your personal wallet address.

MATHEMATICAL PROOF: CYCLE & UPGRADE VALUES

The contract balances position volume and next-tier requirements perfectly, ensuring the system remains completely self-funding as you climb the ranks.

LEVEL	TOTAL MATRIX CYCLE VALUE	AUTO-UPGRADE DEDUCTED COST	NET PROFIT CAPITAL RETURNED	NEW MINING ENTRY TRIGGERED
Slot 1	21.6 POL	20.0 POL	1.6 POL	4.0 POL Cap
Slot 2	43.2 POL	40.0 POL	3.2 POL	8.0 POL Cap
Slot 3	115.2 POL	80.0 POL	35.2 POL	16.0 POL Cap
Slot 4	230.4 POL	160.0 POL	70.4 POL	32.0 POL Cap
Slot 5	460.8 POL	320.0 POL	140.8 POL	64.0 POL Cap
Slot 6	921.6 POL	640.0 POL	281.6 POL	128.0 POL Cap
Slot 7	1,843.2 POL	1,280.0 POL	563.2 POL	256.0 POL Cap
Slot 12	58,982.4 POL	0.0 POL (Max Tier)	58,982.4 POL	Endless Re-entry Loops

THE DIRECT REFERRAL SECURITY GATE

Protecting Active Performance

To prevent static, non-performing participants from draining the global rewards queue, MetaPOL implements a strict **Eligibility Gate**.

The Rule: Minimum 2 Direct Referrals

To receive matrix queue payouts, a wallet address must have directly referred at least 2 active users to the platform.

The Smart Dynamic Scan Loop

When a slot payment is triggered, the contract search engine evaluates the user currently at the front of the line. If that user hasn't met the 2-direct requirement, the contract executes a seamless skip function.

How the Skip Protocol Operates

- ♦ **Zero Freezing:** Ineligible positions are skipped but remain in the line without losing their slot. They are not penalized or deleted.
- ♦ **Forward Progression:** The algorithm moves forward along the queue line until it hits an eligible participant, who then receives the matrix payout.
- ♦ **Mining is Never Skipped:** Even if a user is temporarily skipped in the matrix due to the referral gate, **their passive mining contract keeps generating yields every second!**

WHY POLYGON NETWORK (POL)?

MetaPOL is deployed on the Polygon Layer-2 scaling network to ensure a premium, unhindered experience for all global participants.

< \$0.02

Ultra-Low Gas Fees

Transactions cost fractions of a cent, completely avoiding the restrictive, high-cost gas friction seen on mainnet Ethereum.

2 Sec

Blazing Fast Finality

Block production speeds ensure that registrations, slot upgrades, and mining withdrawals process almost instantly.

100%

Native POL Utility

Operating directly via native POL eliminates token conversion steps. Your revenue is liquid, highly secure, and immediately transferrable.

STRATEGIC FAST-START FRAMEWORK

Maximize your earning velocity right from day one by deploying the recommended community start strategies.

The Triple-Slot Launch

Activate Slots 1, 2, and 3 Simultaneously

- Total Capital Requirements: 75 POL (Registration + Slots 1-3).
- Instantly builds a larger mining capital base to accelerate your daily yields.
- Pre-empts global upgrades, positioning you early to capture high-tier structural spillover.

The 2-Direct Speed Strategy

Secure 2 Partners within Your First 48 Hours

- Instantly clears the referral gate eligibility requirement across all 12 tiers.
- Recovers your structural sponsor allocation capital immediately.
- Promotes duplication across your downline, driving exponential ecosystem volume.

PRO TIP: Users who enter higher tiers immediately unlock massive passive allocations that generate value independently of personal team building!

YOUR WEALTH REVOLUTION STARTS NOW

JOIN THE FUTURE OF YIELD GENERATION

MetaPOL bridges the gap between active networking and automated crypto mining.
100% security, zero human bias, and mathematical certainty.

1. CONNECT

Link your MetaMask or Trust Wallet to
Polygon

2. PREPARE

Fund your account with POL for
registration & slots

3. ACTIVATE

Execute registration and unlock your
passive stream
